Mysuru, Karnataka, Ph:+91 9448736591

prasadschetty60@gmail.com

India

I have 16 years of diverse experience across design, manufacturing, project execution, and Lean implementation in tool room, machine shop floor, sheetmetal shop, tool maintenance department, heavy fabrication. My expertise lies in R&D product design, tool design, SPM's and machine shop manufacturing improvements. I work for by focusing on cost reduction and efficiency, and management objectives.

WORK EXPERIENCE

Sevenloop Technology Pvt Ltd

📍 Bengaluru, Karnataka. from 📅 11/2025

Sevenloop brings AI-driven engineering to manufacturing precision parts — making it seamless, predictable, and transparent. Parts locally & globally manufactured and supplied all over the world.

Roles & responsibilities:

- ✓ Working as technical manager for precision parts and products industrilization.
- ✓ Responsible for Project execution from concept to part approval process and regular production.
- ✓ Right Supplier identification based on project strategy and sourcing. Suppliers @Rajkot, @Pune, @Kolahpur, @Blr, @Coimbatore so on. Travelled and established production process across India.
- ✓ Part validation for Casting parts, Machining, coating stage for Export & domestic requirement.
- ✓ Feasibility study @ RFQ stage to determine the suitable manufacturing process and to meet the QCD for the buyers.
- ✓ Effective PO review, Supplier feasibility, technical feedback to BD team,
- ✓ Interaction with design & quality team for QC documents.

Veerya Attachments Pvt Ltd

📍 Malur, Karnataka

Assistant Manager R&D

📅 10/2024

Company specializing in mechanical attachments and equipment. Crushers, Grapples, Couplers, Hydraulic Cylinders etc.,

- ✓ Lead and Managing R&D Product design & Tool design team with four sections and overseeing development in fabrication, machine shop production for pre and post machined parts/product.
- ✓ R&D New product development, engaging with CFT team, quality control, fabrication, machine shop.
- ✓ Completing of product CAD, Customer approval presentation drawing and pushing BD team to get approval from customer, ECR etc., Complete Manufacturing drawing completion.
- ✓ Designed and developed jigs and fixtures for various manufacturing processes say HMC, VMC, CNC, Welding, Cylinder line etc. Handled tool room activities for inhouse development.
- ✓ Development and launch of the product into production.
- ✓ Hydraulic cylinders design and inhouse development, SPM,s like test rig for testing the cylinders.
- ✓ Special purpose machine design and building, Welding Positioner design and development inhouse, boughtout STD parts/products like motor, gear pinion, bearings etc.,
- ✓ Led 15= projects totaling ₹15 Cr across global regions.
- ✓ HMC & VMC incharge, brought down setting time by providing effective fixtures and cutting inserts/cutters thus increased productivity. Trained operators for KAIZEN & to achieve KPI.
- ✓ Involved in Green field project, Documented all PPAP documents.

Clark Fixture Technologies (India) Pvt. Ltd

📍 Mysuru, Karnataka

Design Engineer - Global Projects

📅 10/2015 – 09/2024

Global company focused on tooling technologies for Aerospace, Medical, Automotive, defense. Has been worked with numerous Space related companies that build engines, rockets and capsules for Low Earth and Deep Space applications. List of few Boeing, GE Aviation, Gulfstream, Pratt & Whitney, Lockheed Martin, Rolls Royce, ULA (United Launch Alliance), NASA etc and BMW, GM, PACCAR, Toyota, Volvo, Ford etc., and Medrobotics, Saint-Gobain, Stryker etc.,

Design

- ☑ Automated Robotic Cell Fixture, Utilizing a check fixture in a robotic cell only makes sense. It will utilize the robotic arm to place the part, right off the bender, into a check fixture to determine whether it conforms to print tolerance. This can be done manually via an operator confirming the part fits the fixture or can be automated by including proximity sensors and a PLC.
- ☑ Designed orbital weld fixtures allow an operator to scribe the end of tube locations, assemble the individual tubes together within the fixture and then orbitally weld the assembly and end features together in an efficient and accurate manner. These fixtures have proven to be extremely successful for companies moving from R&D to a production mode, where rate and repeatability are essential.
- ☑ Almost from its inception, utilized CAD/CAM as a way to design appropriate tooling around a customer's product. With guidance from the PE, the appropriate material, design and features are brought together to fulfill the needs of any given project. As each design is completed, it is reviewed and signed off and then put in a format that can be emailed or uploaded to a secure site. Once these designs are approved by the customer, they are integrated back into our production process.

Manufacturing

- ☑ With the utilization of CAD/CAM Virtual Mfg an NC file is sent to the shop server, a full scale plot of the material is sent to the material prep department and drawings for any metal details that need to be machined are sent to the machining department.
- ☑ Generated NC codes for FANUC, ONSURD and MAZAK machines. Designed Fixtures are made in a CNC environment and machined as one piece, which provides two benefits: First, the machining tolerance is distributed over the entire fixture, rather than stacking up cumulative tolerances of many

WABCO-TVS (India) Ltd. (ZF India)

📍 Chennai, Tamil Nadu

Senior Engineer - Manufacturing Engineering

📅 11/2010 – 09/2015

Leading products of braking systems, Compressors, ABS, Actuators and related products.

- ☑ MSD (Manufacturing System design), Assembly process and production process for products.
- ☑ Production Process design and commissioning. Working along with Low-Cost Automation Team (LCA), PLC team, Maintenance team. Inhouse assembly line design and development.
- ☑ Designed tooling's such as Jigs and Fixtures to meet production targets.
- ☑ Designed fixtures and implemented for improved production efficiency, reduce costs and improve quality.
- ☑ Modified and automated the fixtures or jigs that reduced inventory and spare parts.
- ☑ Automated Design with new technology so to remove bottleneck in machining cell and assembly cell.
- ☑ Documentation process flow chart, status card, checklist, PPAP documents, FMEA etc.,

NTTF Industries Pvt. Ltd

📍 Bangalore, Karnataka

Graduate Engineer Trainee

📅 08/2007 – 07/2008

Industrial training center and production company.

- ☑ Managed production planning and supervision in press shop operations.
- ☑ Tool room engineer with focus in die maintenance, both press tools and plastic moulds.
- ☑ Engaged in lean operations and SMED tryout.

SKILLS

Ptc Creo, Proe, Solid works, Autodesk Inventor, AutoCAD, ERP, Vault, Business Development, HMC, VMC, CNC, DFM, EXCEL, Inventor, Kaizen, Kanban, lean manufacturing, Microsoft Word, MS office, Powerpoint, process design, Quality Assurance, Reverse Engineering, SolidWorks, Welding, ERP Software. IMTA Certified Gauge Designer

EDUCATION

Masters of Engineering in Tool Engineering	NTTF	📍 Bangalore	📅 08/2008 - 10/2010
Bachelor of Engineering (Mechanical Engineering)	BDT	📍 Davangere	📅 08/2005 – 07/2007
Diploma in Mechanical Engineering	Govt. Polytechnic	📍 Raichur	📅 08/2001 – 07/2004
Class X	KPCL	📍 Raichur	📅 04/2000 – 03/2001

KEY ACHIEVEMENTS: ACMA Prestigious Award winner First Place during year 2014 in productivity improvement.
